## INTRODUCTION

A fungible token of ERC20 standard with antibot functionality.

Name	BinanFi
Audit date	2022-06-22 - 2022-06-22

## AUDIT PROCESS

The code was audited by the team according to the following order:

### Automated analysis

-  Scanning the project's smart contracts with several publicly available automated Solidity analysis tools
-  Manual confirmation of all the issues found by the tools

### Manual audit

-  Thorough manual analysis of smart contracts for security vulnerabilities
-  Smart contracts' logic check

## CLASSIFICATION OF ISSUES

<b>High severity</b>	Issues leading to assets theft, locking or any other loss of assets or leading to contract malfunctioning.
<b>Medium severity</b>	Issues that can trigger a contract failure of malfunctioning.
<b>Low severity</b>	Issues that do now affect contract functionality. For example, unoptimised gas usage, outdated or unused code, code style violations, etc.

## ❖ ISSUES

### High severity issues

No issues were found

### Medium severity issues

No issues were found

### Low severity issues

#### 1. Antibot may block transfers (AntiBotStandardToken)

The contract calls an external contract for antibot protection. The antibot contract is deployed via proxy and it's coe can be changed. The antibot may potentially block transfers.

```
function _transfer(
    address sender,
    address recipient,
    uint256 amount
) internal virtual {
    ...

    if (enableAntiBot) {
        pinkAntiBot.onPreTransferCheck(sender, recipient, amount);
    }
    ...
}
```

## ◆ CONCLUSION

BinanFi AntiBotStandardToken contract was audited. 1 low severity issue was found.
